bridgenext.

BridgeNext

A web app that helps working adults see how AI is changing their tasks, compare adjacent careers and plan affordable reskilling.

SDC HACKATHON 2026 · DOMAIN 1: THE AIVERSECITY FUTURE-READY WORKFORCE

Team EyeScream

Working adults whose tasks are moving to AI

Example: a finance operations assistant hears

“From next quarter, invoice checking, reconciliation and reporting move to AI-enabled workflows.”

Strengthen my current role, or move to an adjacent career?

- **Limited study time**
- **Limited money**
- **Little guidance on which skills will stay useful**

Demo group: finance operations & admin staff, Malaysia

Why this group first: clerical work is the most exposed to generative AI (ILO, 2025).

The problem is large in Malaysia

620,000

jobs expected to face significant change within 3–5 years

18% of employees across 10 key sectors

TalentCorp impact study (Malay Mail, 2024)

56% vs 26%

Hays (2025)

1 in 4

workers worldwide are in jobs with some generative-AI exposure

clerical work is the most exposed

ILO Working Paper 140 (2025)

Economic risk

Changing task requirements weaken employability, and poorly targeted reskilling wastes scarce time and money.

Social risk

Unequal access to understandable career guidance and affordable learning, especially for workers with little employer support.

How BridgeNext helps in four steps

- You confirm every skill and choose the direction and pace.
- Tags show which Domain 1 features each step delivers.

01

Build your profile

Answer a four-step questionnaire or load a CV, read only in your browser. Gemini can suggest skills from a short description; you confirm each one.

1 · Skill profile

02

See AI in your tasks

For each of your tasks, see how people use AI (AI-led or working together), with source and month.

2 · Trend signals

03

Compare 5 directions

A match score you can break down, with transferable strengths, skill gaps and two future scenarios.

3 · Explainable match

6 · Two scenarios

04

Plan your learning

Free resources in order, with hours and weeks fitted to your weekly time and an SDG link for every skill.

4 · Learning pathway

5 · SDG mapping

Limited study time
→ Hours and weeks fitted to your weekly time

Limited money
→ Free resources: all 8 in today's catalogue are free

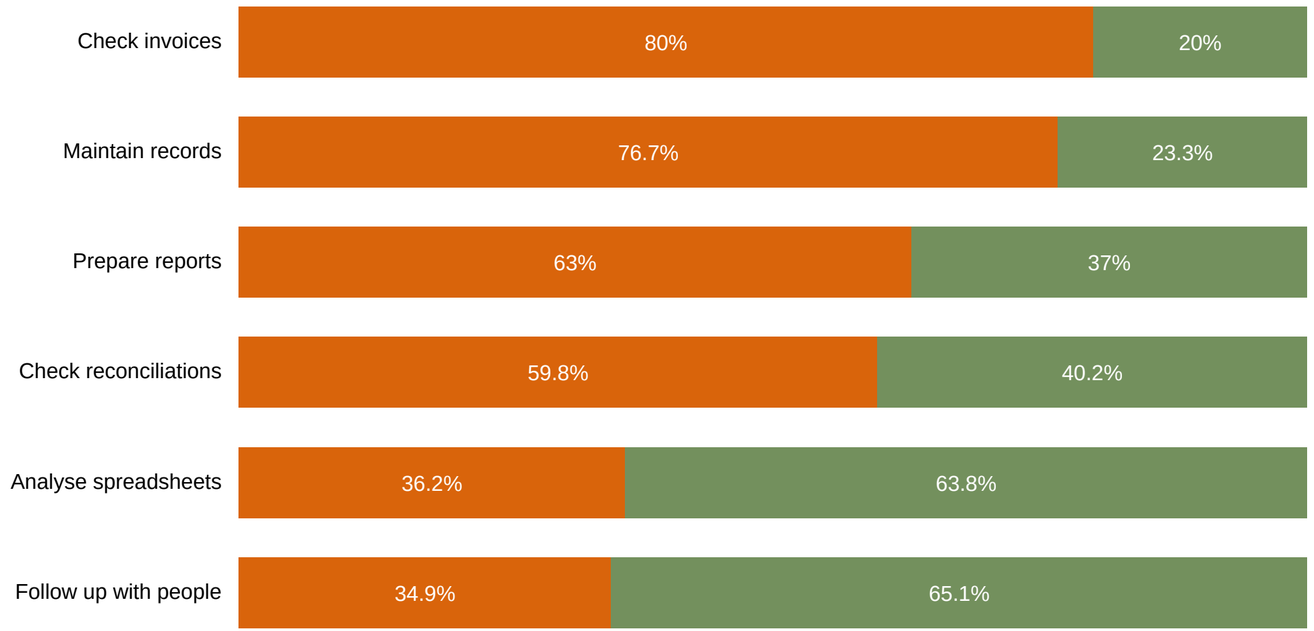

Little guidance
→ AI evidence for your own tasks and a score you can question

How people use AI for six tasks in our demo group

Share of sampled conversations for each task, May 2026

AI-led: asking AI to carry out the task

Working together: using AI to learn, refine or review work

What BridgeNext does with it

Each task links to the skills it uses. Where AI-led use is higher, checking and oversight skills count slightly more and routine execution skills slightly less.

Kept up to date

While it runs, the backend looks for new releases every 6 hours and validates them before use.
Check reconciliations, AI-led share:
53.6% in April → 59.8% in May 2026

- AI use by task: Anthropic Economic Index, 26 June 2026 release (global) — how people use AI, not how much of a job AI can do.
- Occupations, tasks and skills: O*NET OnLine.
- Job outlook: U.S. BLS 2025–35 projections, shown as context, not scored.

Two scenarios show which skills matter alongside AI

In “More AI-led work”, skills are re-weighted

Routine execution × 0.8

- Spreadsheet analysis
- Record management
- Reconciliation
- Payment follow-up
- Financial reporting

Checking and oversight × 1.2

- AI output verification
- Risk and internal controls
- Critical thinking
- Exception handling
- Data validation

“Today’s work” keeps the evidence-adjusted weights.

Test profile, preparing for Financial analyst: top three learning priorities

Today’s work

Balance everyday execution with checking and judgement.

1. Critical thinking
2. Stakeholder communication
3. Spreadsheet analysis

More AI-led work

Put more emphasis on checking AI results, judgement and exceptions.

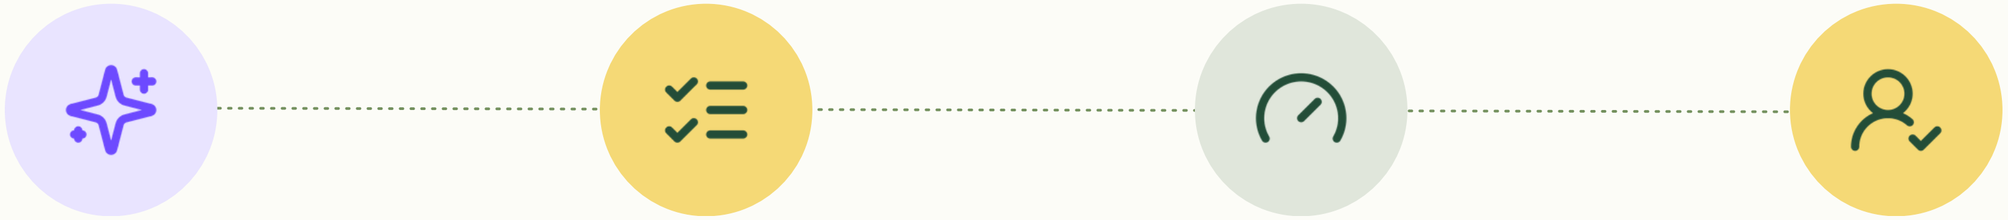

1. Critical thinking
2. Stakeholder communication
3. **AI output verification**

Worth learning in either view
Critical thinking · Stakeholder communication

Both views are model assumptions, not forecasts of AI adoption or job loss.

WORKING WITH AI · INSIDE THE APP

Inside BridgeNext, AI suggests and the user decides

AI · GEMINI 2.5 FLASH

Suggests

Optional: reads your own description and suggests skills. Only catalogue skill IDs are accepted; anything else is discarded.

YOU

Confirm

Confirm each suggested skill, then rate your confidence from 1 to 5.

RULE ENGINE

Calculates

Scores, skill gaps, scenarios and the study plan. The same input always gives the same result.

YOU

Decide

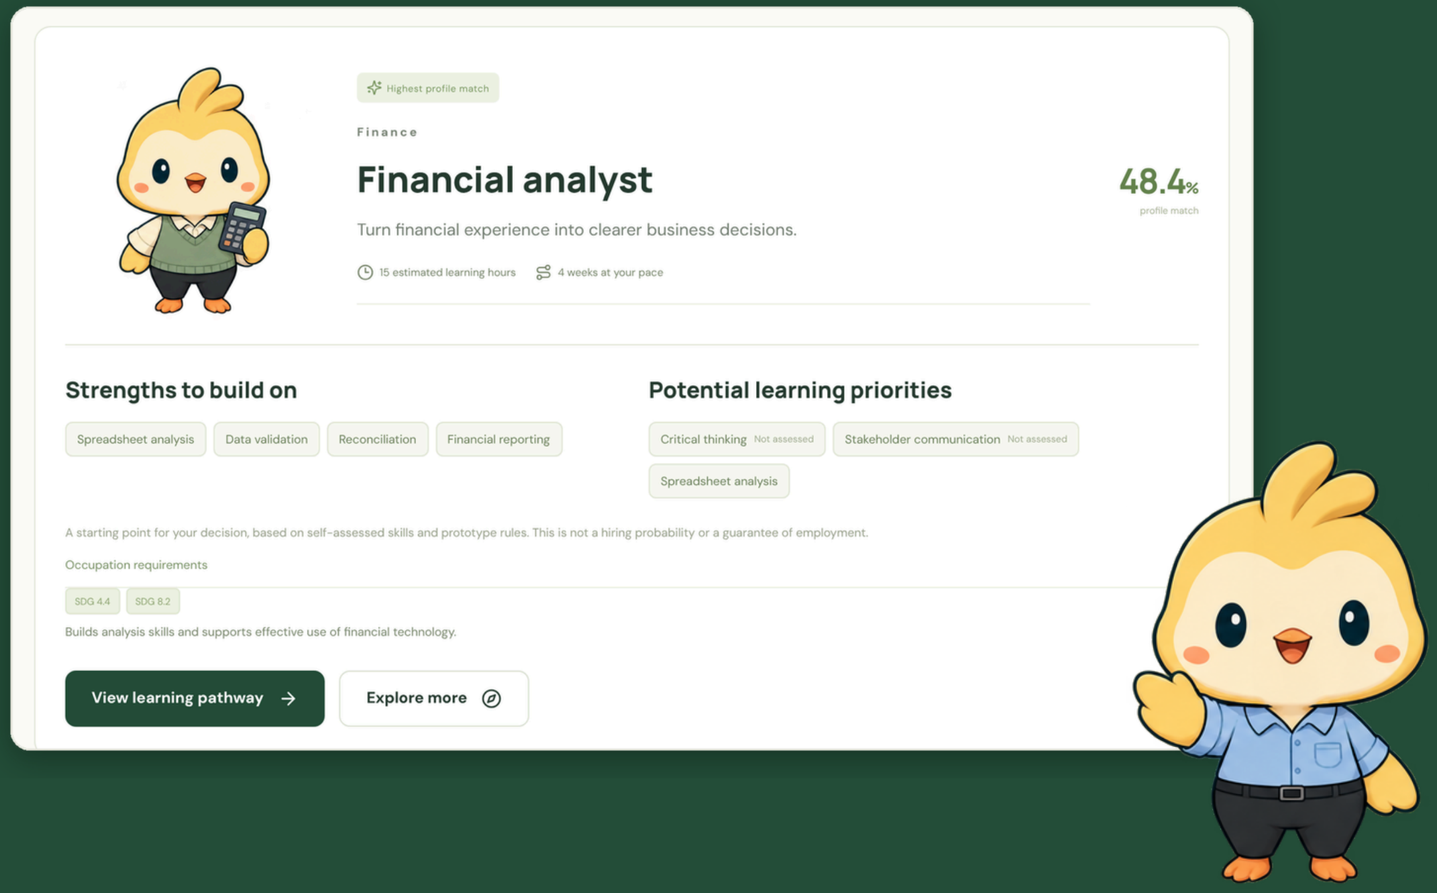

Compare five directions and their sources, then choose your direction and weekly pace.

DOMAIN 1 BOUNDARIES WE FOLLOW

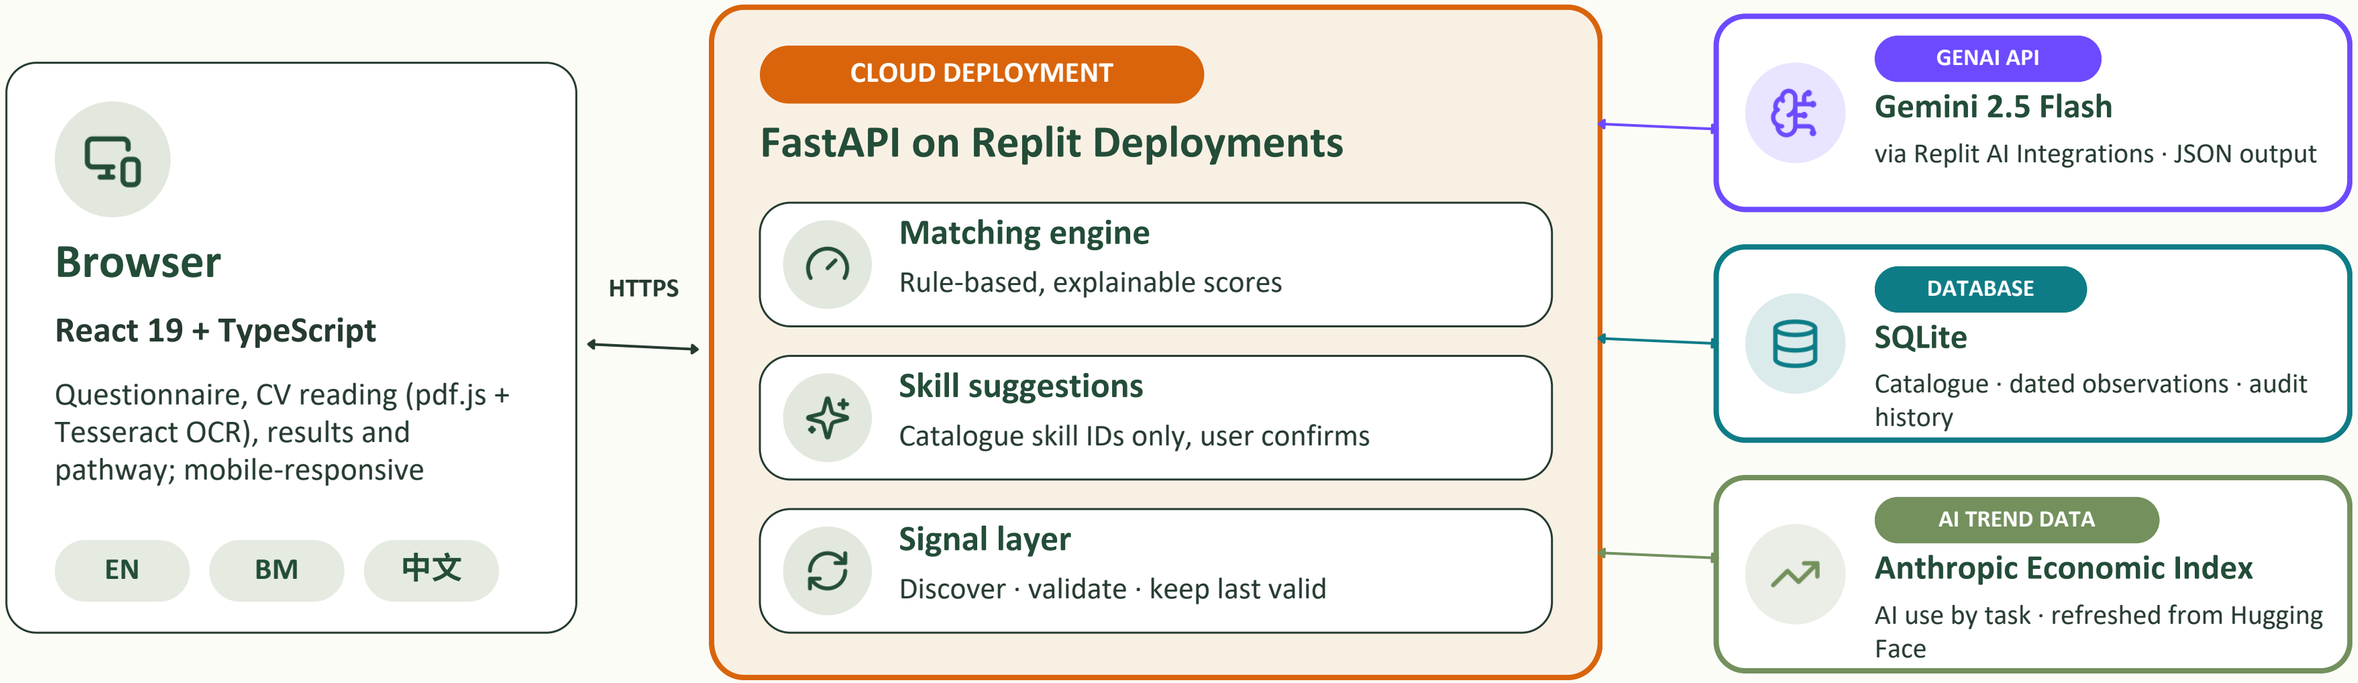

- Public data and a synthetic CV only; no real CVs
- LLM named and declared: Gemini 2.5 Flash
- A source for every role, skill and resource
- CV files never leave the browser
- Scores never use age, gender or ethnicity
- No payments or hiring

Live Demo

bridge-next.replit.app

One deployed service, three workshop skills

DATA SOURCES

- **Anthropic Economic Index** · AI use by task
- **O*NET OnLine** · occupations, tasks, skills
- **U.S. BLS 2025–35** · job outlook, context only
- **UN SDG targets** · SDG links
- **Microsoft Learn, IFRS, COSO** · free learning
- **MyCOL, DOSM** · Malaysian context (linked)

Public GitHub (Apache-2.0) → Replit build → live at bridge-next.replit.app

What is new, and what happens when something fails

WHAT IS NEW

Task-level AI evidence

Dated, refreshed and validated, not a fixed list.

Scenarios change priorities

Labelled as assumptions, not forecasts.

Every result can be traced

AI only extracts skills; rules calculate; you confirm.

HOW THE MATCH SCORE IS BUILT

Test profile, Financial analyst: 0.7 × 48% + 0.2 × 50% + 0.1 × 47.6% = 48.4%

10% = scenario-adjusted fit, from AI evidence

BIGGEST RISK AND FALLBACK

RISK

A new evidence release changes format or coverage.

FALLBACK

Each download is pinned to a fixed revision and validated. If a check fails, the last valid evidence stays active and the failure is logged.

MODEL DOWN (GEMINI)

Labelled keyword matching keeps the whole flow working.

How we will measure impact on SDG 4.4

SDG 4.4 Relevant skills for employment and decent jobs

Supporting: SDG 8.2
Productivity through technological upgrading

BASELINE TODAY

26%

of Malaysian professionals have had AI training, while 56% use AI at work (Hays, 2025)

Product baseline: not yet measured. Phase 2 sets it with a static reference pack and the same rubric.

WHAT WE MEASURE

Career-planning task success rate

Success = a plausible career choice with a sourced reason, one relevant skill gap, and a suitable resource and schedule within the time budget.

successful ÷ evaluated × 100

PHASE 2 TARGETS · ≥ 6 USERS

≥80%	planning-task success, above the reference pack
≥80%	identify one skill that is a priority in both scenarios
100%	source coverage for recommended roles, skills and resources
100%	of resources free or ≤ RM100 each (all 8 are free today)

Targets are proposed, not achieved results. With six users, at least five must succeed (83.3%).
